Important Information on Using Chafing Fuels

The proper placement of any fuel source is critically important to get maximum heat performance. A wide variation in distance from the fuel retainers to the bottom of the water pan exists in various models of chafing dishes. We have seen variations as much as 7 inches. Since Easy Heat cans do not get hot, placing them directly on the table is not a problem.

Without Fuel Can Holder

Placement of the Fuel can under the chafer is critically important to get the maximum heat value from the product.
