

CHOICE[®]
BY GLASTENDER

Choice Bar Fabrication

A Family Company
Manufacturing in the USA

Choice Underbar Features

Drainboard cabinets have a unique drain design allowing them to be flush mounted to the bar die wall

20 gauge fabricated multiple sink bowls are 70% thicker than industry standard for greater durability. Over-sized bowl easily accommodates brush washers

All drainboards have fully corrugated work surface for increased aerated glass storage

Backsplash faucets are removable from the front of the equipment for easier service

Leg tube set into recessed sockets for added strength

One-piece seamless backsplash and front skirt on combo ice bins is easier to keep clean and more aesthetically pleasing

Threaded inserts for mounting standard size speed rails for easier installation and more secure attachment

1/4" radius corners on blender shelf are easier to keep clean

Liquor steps come standard with integral bottle retaining rails

The main reasons why Choice is superior to Perlick

Choice Underbar

The Choice underbar line is all stainless steel fabrication.

Choice underbar is welded construction with bolt-on legs. For greater strength and rigidity, integrated C-channel stiffeners are welded to the backsplash and to the one-piece side and leg pad.

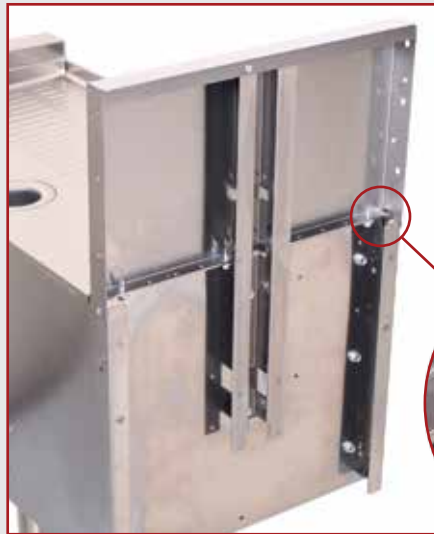

Choice underbar units (except ice bins and corners) have a one-piece seamless top and backsplash, making them easier to keep clean.

Perlick Underbar

The Perlick underbar line is not all stainless steel fabrication.

Perlick underbar is assembled with sheet metal screws. If present, the separate backsplash stiffeners are attached with screws and/or pop rivets.

Perlick underbar typically has a siliconed seam at the front rail and backsplash.
