Our #10 Can Holder designed to mount on to the wire grid and accommodates 4 cans.

Wire mounted shelves mount directly to the grids. This eliminates the need for vertical brackets, shelf supports and additional shelves; however, this style of shelving may not have the same weight capacity as those installed with the components listed above.

Various specialized brackets [fig. 2-4, below] are available to retro-fit some of our most popular items to the horizontal mounts that the standard vertical brackets cannot. For example, the bracket [shown in fig.1 and fig. 4] has been designed to hang a wire grid or our utensil rack directly from the horizontal bracket.

Additional retro-fit brackets [shown below] can accommodate other existing items currently in our assortment. The advantage to using these brackets with your EZ-Wall systems is that you are no longer mounting shelving directly to the wall, so you can move or adjust the position of your shelving depending on your needs.
