multi-tenant video door entry

GT Series

multi-tenant video door intercom

Security begins at the entrance. Locked lobby doors are common in apartment and condominium buildings, independent senior living facilities, and student housing.

More and more states are adopting building codes calling for the installation of video intercoms at lobby entrances. Aiphone's GT Series provides the best solution for these new requirements. Residents can visually identify their visitors clearly before granting them access to the rest of the building.

The GT Series is a window to the outside world

Aiphone's GT Series is the multi-tenant video door intercom for buildings and dormitories. This year, Aiphone introduces new technology upgrades to their most popular product line.

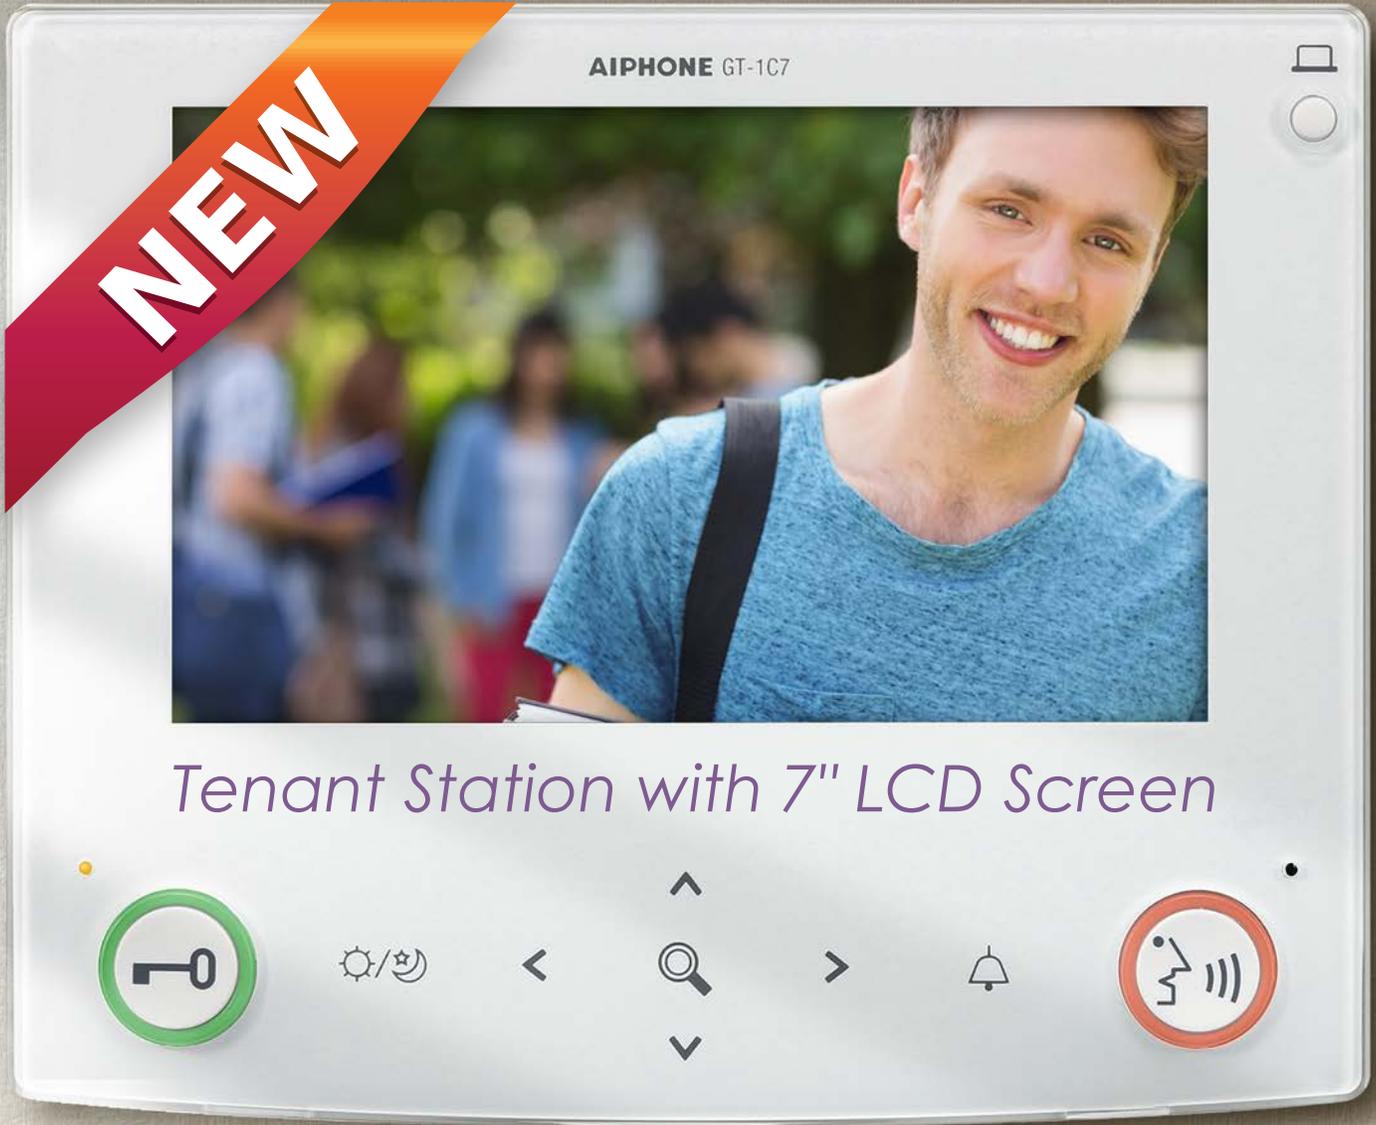

January 2017

- Improved video camera quality
- Two new, slim-design Tenant Stations
- Video line out to securely record lobby video onto a Video Management System (VMS)

Summer 2017

- A brand new video Guard Station with NFC compatible programming
- Network compatibility allowing Guard Stations to be installed on or offsite
- On or offsite control; buildings across town can be linked together and controlled from a single office or offices

Window to the outside.

reliable quality

Since their early days in 1950, Aiphone has been world renowned for engineering long-lasting and reliable intercoms. Even after damaging fires and hurricane level floods, Aiphone intercoms still continue to perform. *Now that's dependability!*

save long term

Aiphone's GT Series is a simple, wired intercom solution. A telephone line connection is not required, so buildings can avoid the expense of a monthly phone bill, and save long term.

Control who gets in.

DELIVERIES

Easily identify guests and buzz them in to grant access. Buildings stay safer when residents properly determine the intent of visitors at entrances.

Should anyone pose a threat, residents can contact the staff at the Guard Station to alert them of a possible situation.

contact security quickly
with the touch of a button

Every Aiphone Tenant Station includes an alert button. When pressed, the Guard Station is immediately notified. Students and residents can get help, *quickly*.

convenient security

Today's homeowners and tenants are attracted to safe and inviting environments. The GT Series provides this additional level of security. Direct calls to Tenant Stations can only be answered from within the residence, ensuring all visitors have been properly screened.

500 Tenant Stations

With five different Tenant Station models to choose from, the GT Series provides system-wide flexibility. Select which combination of stations best suit the needs of the building and the budget.

4 Guard Stations

Concierge and security staff can easily screen visitors, control secondary entrances, and assist tenants as needed.

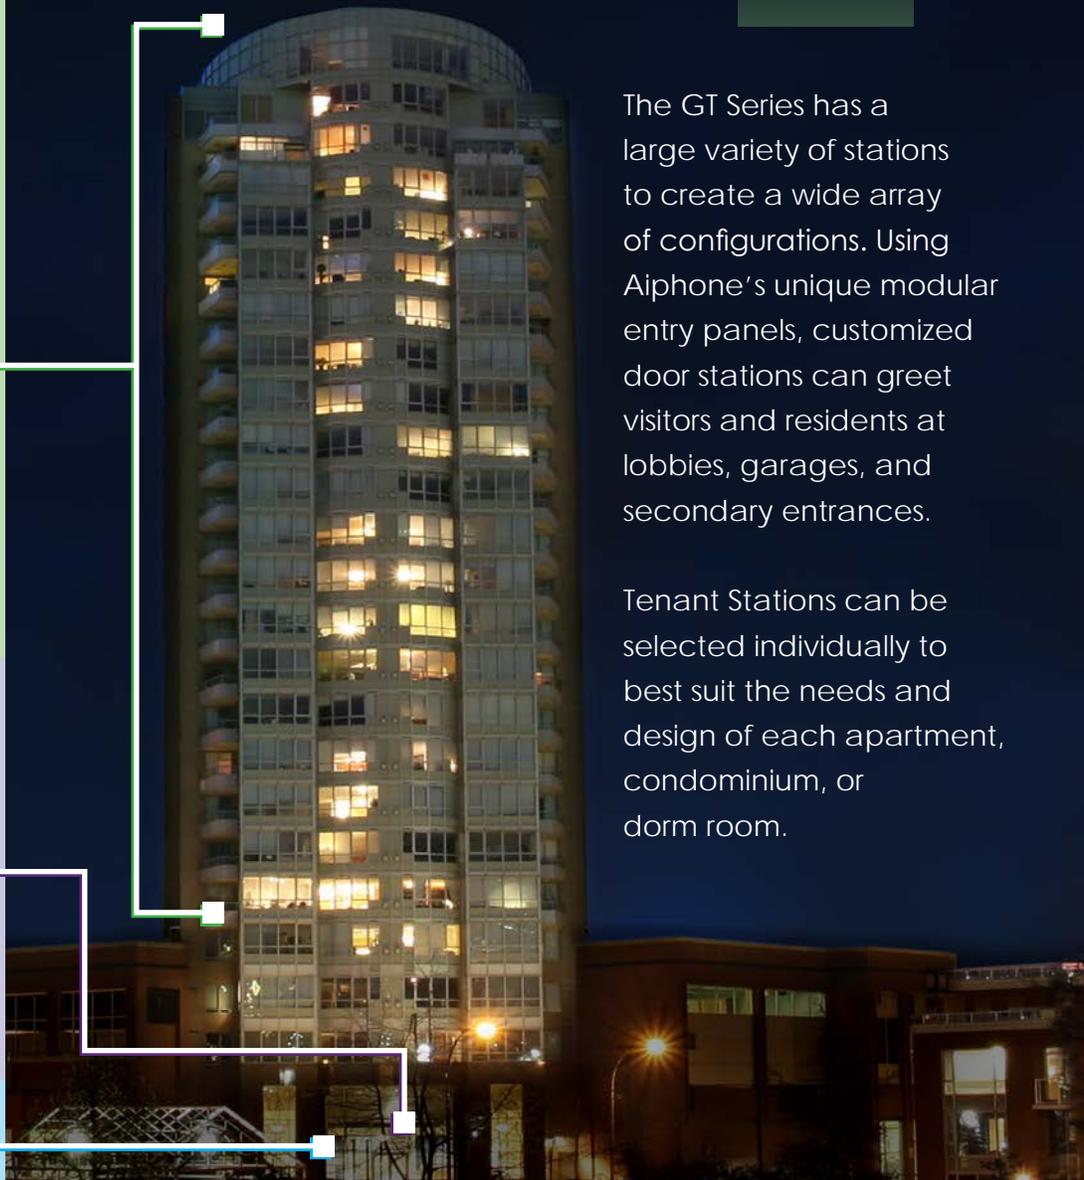

16 Entrance Stations

Select between All-in-One Entrance Stations or opt for customization using modular components to build the solution that suits the aesthetics of any building.

How it works.

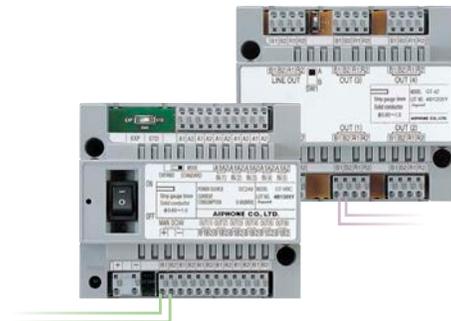

The GT Series has a large variety of stations to create a wide array of configurations. Using Aiphone's unique modular entry panels, customized door stations can greet visitors and residents at lobbies, garages, and secondary entrances.

Tenant Stations can be selected individually to best suit the needs and design of each apartment, condominium, or dorm room.

the simplicity of bus control units

The true beauty of Aiphone's GT Series lies within the wiring. System components can be homerun or loop wired back to the bus control units, using a pair of wires for the audio signal and a pair for the video. All wires terminate at the bus control units located within the building rather than terminating at exterior Entrance Stations, providing an additional layer of security.

connect buildings over a network!

The new IP bus control unit can bring multiple GT Series systems together. Centralize security by connecting buildings and installing Guard Stations at command centers or property management offices. Dorm rooms will be able to quickly connect to security, even if security is across campus.

Q3 2017

easy tenant updates

A new GT Series programming app will be released in the summer of 2017. Tenant names and apartment numbers can be edited in the office on a PC, transferred to an NFC compatible mobile device and then uploaded to the system wirelessly.
